PROFESSIONAL SUMMARY

Data analyst with a Computer Science foundation, completing an MSc in Business Analytics at Ivey (December 2026). Builds end-to-end data pipelines, risk models, and LLM/RAG systems on real public and market data, from 117,902 warranty records to a 31-source daily intelligence feed, and turns the output into decisions for senior leadership.

EDUCATION

Ivey Business School, Western University — London, ON	2025 – 2026
MSc, Business Analytics (Candidate) — 84.8% Average — graduating December 2026	
• Entrance Scholarship for Academic Excellence (\$5,000); selected for Graduate Student Innovation Scholars (GSIS), 2025–2026 • Coursework: Big Data Analytics (Azure Databricks), Data Management, Decision Making with Analytics, Pricing & Revenue Analytics, Business Statistics, Digital Transformation	
Western University — London, ON	2019 – 2023
BSc, Computer Science — Dean’s Honor List; Western Entrance Scholarship	

EXPERIENCE

Sifton Properties Limited — London, ON	
<i>Data and Market Intelligence Analyst, Neighbourhood Developments</i> (retained part-time following internship)	Aug 2026 - Present
<i>Real Estate Analyst Intern, Neighbourhood Developments</i>	April - Aug 2026
• Built a fully automated market-intelligence pipeline in Python monitoring 31 regulatory, industry, and competitor sources daily; normalization and de-duplication feed a two-stage keyword + LLM scoring engine, cutting senior leadership’s monitoring time from hours to under 10 minutes. • Layered a retrieval-augmented (RAG) system on the pipeline’s article database, answering ad-hoc market and competitor questions in natural language with source citations. • Built a builder risk register ingesting a provincial regulator’s public data (117,902 warranty enrolments, 3,674 claims records) into SQLite; a weighted model scores claims as rates rather than raw counts, and automated change detection logged 11,880 changes across 15 crawl runs. • Built a building-permit reporting tool over 770 permit records in London and St. Thomas, analyzing product mix, volume over time, builder segmentation, and market concentration, packaged as a standalone desktop application. • Built a data pipeline and self-contained dashboard joining CMHC, StatCan census, resale-board, and IRCC data into region-level comparisons, heatmaps, and choropleth maps. • Built a Flask application using LLM APIs to profile 337 municipal election candidates’ land-use and development positions into structured comparison reports. • Built a lot × product matching engine computing each lot’s buildable area net of zoning setbacks and matching house plans to it, exported as a self-contained builder-facing web page. • Authored a 3-year technology roadmap and a 9-gap needs analysis of the team’s development data; evaluated 5 demographic data vendors and ran comparative market analyses across 20 neighbourhoods.	
Mana Lounge — London, ON	Sept 2024 – April 2026
<i>Business Analyst (Part-Time)</i>	
• Built pricing and valuation analyses on secondary-market datasets (TCGplayer, eBay, vendor feeds) supporting inventory investments that returned 40–70%; tested dynamic pricing against sales velocity and demand volatility for a 5–10% lift in SKU-level profitability. • Designed a MariaDB relational database for inventory, sales, and trade-in records, replacing manual tracking.	

RESEARCH & PROJECTS

Natural Language Processing Research — University of Ottawa	2025
• Developed NLP models scoring unstructured clinical transcripts for neurology research: 83% accuracy vs. an 80% human-rater baseline, cutting processing from ~4 hours to under 30 minutes per transcript; code forthcoming in a peer-reviewed psychology journal.	
Graduate Student Innovation Scholars — Western University	2025 – 2026
• Led market sizing and competitive landscaping for a runner-up business plan (2nd place, \$1,500).	
Volunteer Management Consultant — Endeavour Consulting for Non-Profits	Sept 2026 – Present

SKILLS

Languages: Python, SQL, R, Java, C++
Data & AI: pandas, scikit-learn, Hugging Face, Anthropic & OpenAI APIs, LLM/RAG systems, web scraping & public APIs, SQLite, MariaDB, relational data modelling
Reporting & BI: Google Data Studio, Python/HTML dashboards, Excel, PowerPoint
Tools: Flask, Git, Linux; Azure Databricks (coursework)
